RECENT PROJECTS

Upstream Oil Client – Performance System Optimization

Daniel Partners is working with a global upstream business to optimize parts of the planning and performance process by giving strategic input to a key application selection which will enable improved ranking and scheduling of operational activities.

Utilities Client – Finance Function Transformation

Daniel Partners recently improved the controlling and reporting processes for a growing utilities business, improving the quality of data and reducing the overall costs of the finance function.

Metals Client – Follow on project work after the SAP Treasury assignment

Daniel Partners managed successfully the implementation of authorization rights for 1000 users. Work is also ongoing for another strategically important balance sheet project.
